

STORY BOARD - 1

STEP-1

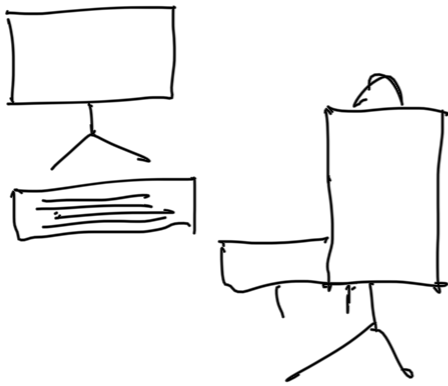

Deniz has an ailing mother. Due to this Deniz logs into the VAS tool to check the alexa command fed into the device used by his mother.

STEP-2

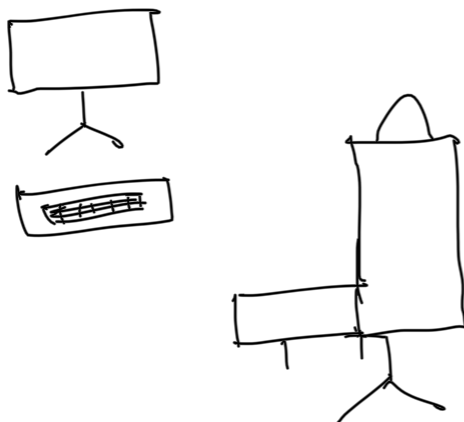

After saving the account details, Deniz goes to the session settings page and select the session he wants to check.

STEP - 3

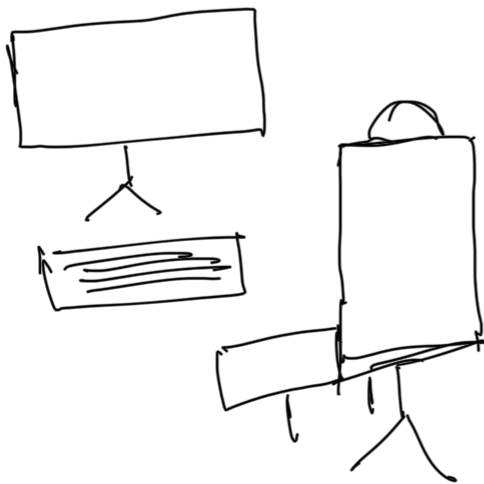

Deniz then goes to select previous saved session to make sure he has not missed anything from the past dates.

STEP - 4

Then he submits the data and download all the command history for the selected session.

STEP -5

After downloading he remembers that he has some previous backup as well to check the commands. So he uploads some prior data and checks if every session he wants to download is there with him or not.
